swiss quality 

swiss quality  collectorTM 170,250,320

Characteristics

- perfectly synchronizes, delivers and stacks
- synchronizes and controls the flow of material
- free access for adjustments
- increase your productivity! Lower your costs!

Option

swiss quality  **collector** TM 170,250,320

Characteristics

Collector

The Collector unit permits a perfect synchronization, stacking and delivery in the post process after the Fotoba cutter.

Advantages:

Synchronizes and controls the flow of material, post process to the Collector.

The direct flat surface guarantees that even heavy and extremely flexible media (over 900g/m²) gets processed with clean and exact end cut.

The rigidity load caused by hanging media is eliminated by using the feeder section with the conveyer belts, therefore (distortion warping) corners during lateral cutting is avoided.

The feeder section of with its conveyer belts with pneumatic control can be opened up 90 degrees. This allows free access in between the Collector and the post process.

The two-meter-long storage unit has adjustable positions driven by linear motors from 16 degree declining up to a horizontally flat work table.

Increase your productivity! Lower your costs.

Easy to use, built for durability

The Collector is available in 3 versions:

Col-170 For use in post process

For materials up to 180cm wide

Col-170S Same as Col-170 plus side stacker

Col-250 For use in post process

For materials up to 260cm wide

Col-320 For use in post process

For materials up to 350cm wide

Only Collecting table:(Table surface coated wood)

CT-170 For use in post process

For materials up to 180cm wide

CT-250 For use in post process

For materials up to 260cm wide

CT-320 For use in post process

For materials up to 350cm wide

Technical Data:

Power: 230VAC, 5A

Compressed air connection required: 5 bar 300 l/min

No power. No air
